MHS DATA REPOSITORY POINT-IN-TIME EXTRACT

The tabulation of MHS eligibles is based on the MHS Data Repository (MDR) Point-in-Time Extract (PITE). The MDR PITE is derived from the DEERS PITE, a monthly snapshot of the new DEERS Oracle database, reflecting beneficiary status at the end of the month as observed a few days into the next month. The MDR PITE includes additional fields (such as improved zip codes of residence for active duty Navy, and improved catchment area of residence for all) and also includes "flags" to identify unduplicated persons who have current MHS eligibility. This MDR file is tabulated to produce the monthly reports of counts of eligibles referenced in the contract.
